## Award winning Greystones!

The site previously housed a single bungalow of no historical or architectural note. Our clients brief was to demolish the existing house and replace this with 2 generous houses, one of which to become their new house, the other to sell on.

Each house is some 600m2 spread over 3 floors, which negotiate the changing levels of the site. As such the first floor from the front approach leads you through to the rear garden level. The highly contemporary properties respond to the surroundings utilising white render, but in simple modernist forms with timber cladding and elegant glazing systems, which create a delicate blend of privacy and views.

The Greystone houses were Shortlisted for the Hertfordshire Building Futures Awards 2011. The judges commented: "The Greystones Houses are a perfect example of how sustainable design can be intertwined effectively with modern amenities in a domestic setting."

Nicolas Tye Architects welcome Richard Langridge on board! Richard joint the team as a senior associate working on all stages of the design process as well as business development and project support.

Richard's project experience includes residential, education from preschool through to higher education, leisure, commercial offices and industrial buildings fronting projects for large multinational companies, Local Authorities and Private Sector clients.

**International Bank.** Located adjacent to the heart of London's west end shopping district parallel to Oxford Street. The existing building comprised of an empty concrete shell to the ground and basement levels. The upper floors were a mixture of Cat A and Cat B fit outs which needed significant modification or complete replacement.

Our extensive fit-out created an executive boardroom level on the 5th upper most floor, on the 4th floor a series of waiting and meeting rooms along with a formal reception for high net worth individual clients. The remaining upper floors are fitted out to a very high office specification with Knoll bench desking, Vitra chairs, bespoke tea-points, Bisley storage units, Modular lighting and bespoke joinery. The ground floor provides the retail banking facility with its astonishing stone finished open plan high specification layout, dramatic lighting and wenge finished joinery. The basement level contains the security vaults and safety deposit boxes along with a dramatic elongated approach corridor, reception and waiting facilities for high net worth individuals. The remaining basement area being utilised for back of house training and storage.
