Cedarwood is complete!

Winner of the Northern Design Awards 2010.

Nestled deep within the established plot the simple series of refined linear buildings blend seamlessly and capture the innate natural beauty of their setting. Strategically positioned the buildings provide an array of landscaped courtyards each with its own distinct character.

The natural slate roof lines, which float effortlessly over the buildings, provide shelter and protection from the elements. The purity of the roof forms are further enhanced by the use of recessed guttering and concealed down-pipes.

Constructed from a rigid steel frame the buildings are clad externally in Western Red Cedar, which has a superior natural durability and resistance to moisture, decay and insect damage. The use of Cedar provides a strong visual connection and roots the buildings within its landscape.

Widftower Centre. This is a unique and exciting project provides a new gateway for the enrichment of life, learning and joining with nature in enveloping ourselves within its ecosystem. Our building inspires through its connection between humans and nature responding through its time-based visual colour changing roof canopy, environmentally controlled air flow, water collection and energy use.

International Competition - Shortlisted Finalists from 144 teams - £5million

Olympic Residence Found on the seafront of the Cypriot city Limassol, this apartment takes up an entire floor of an exciting residential block that makes the most of exquisite views across the Mediterranean Sea.

Our involvement came at the detail design stage, where we were appointed to remodel the design and develop an exciting and individual interior. The material palette is simple, employing white, black and wood as the key components. The holistic approach has allowed for the true execution of the design concepts.
