Contemporary in the Country!

A replacement dwelling within Greenbelt and Area of Special Landscape Value, the building was designed to maintain the important features of the existing site, allowing the residents to integrate with their surroundings. The form reflects the topography of the site and embraces the mature landscaping.

The new design steps down with the fall of the site and uses this level change in conjunction with the modularization of the house to create more intimate areas which emphasize and echo the topographical context of the site.

This contemporary dwelling uses white render, timber louvres and elegant glazing systems that respond to the building's surroundings, blurring the division between inside-and-out, whilst also creating light modernist forms that add to the character and architectural appearance of the proposal.

We are happy to announce that we are now ISO14001 and ISO9001 accredited!

Badminton Centre. We were recently invited to pitch for a new fitness facility. The bold simple form seeks to deliver a practical and economical solution for the long term survival of the facility and community integration. In form, solidity contrasts transparency and similarly texture is delivered through a contrasting use of natural weathering corten cladding set against the purity of sand blasted glazing.

Tomorrow's Townhouse. The design is based upon the promotion of Future Form Modular Building Systems in the modern home.

It provides eco-friendly, sustainable, low maintenance buildings with over 90% reduced waste during the construction process. It also provides a high level of thermal insulation and air tightness to the building. The structural design of the building is very advanced with regard to ease of construction, as well as the prefabrication of the interiors and the facade to the buildings.
